## About MarketingProductReview.com

Marketing Product Review is your place to get up to date on the newest products in the market and hear what others have to say about it before you buy. You can even see how people rate the products as well to get an idea if it is worth your time and money or not.

We will be allowing vendors a place to tell the world about their new products and services and we will help get it out to the masses. We are not reviewing the products.

In the spirit of Web 2.0 we are allowing the vendors to describe the products and letting the world rate the product so that people can get unbiased ratings and reviews in the comments. This is better than just a one person review.

In order to fund this site and this project, we do promote all vendors products with an affiliate link to our site. We do not necessarily endorse any products. We let the community rate and review the products.

We look forward to reviewing many products for you over the years to come while building an archive of products so that anyone can come here and decide what products are worth buying or avoiding.

# SOFTWARE DEFENDER

PROTECT YOUR DIGITAL PRODUCTS FROM PIRACY

## Stop Chronic Refunders & Thieves

- Works with many forms of digital products.
- Integrates with all major merchant systems
- Very easy to use
- Fully Automated

If you create and sell your own ebooks, software, or you resell other digital products, it is inevitable that sooner or later a few things are going to happen:

- Someone will purchase your product, download it and ask for a refund, then still use your product.
- Someone will buy your product and then give a copy to a friend or post it on a file sharing service.
- Profit at your expense by selling bootleg copies - individually or packaged - of your digital product on burned CD's, in online auctions, or on the Internet, just to name a few.

Either way, we call this theft of product. There are many tools and systems available to limit product theft, most of these security schemes are actually very easy to foil or extremely expensive and complicated to implement.

Luckily, there is a new subscription-based service from Rod Beckwith called [Software Defender](#). It works extremely well, is easy to implement, and very difficult to break.

There are two parts to the [Software Defender](#) service. An admin system where you establish a secure product for download, and a Windows-based application which wraps around your product to make it secure.

Once wrapped, it can only be unlocked with a license code available from you. This code can be restricted down to the IP and MAC layers to prevent your product from being passed around like candy among friends and thieves.

We tested the system and it only took a few minutes to enter and generate the required product information, download location, and digital security rules.

Once wrapped, the application will be installed and run normally. However, should someone attempt to share that protected file with another person, the application will NOT work. Everything is locked to the individual PC, and tracked by IP and MAC layer.

Two of the best things about Software Defender is that you can create time-bomb trial versions just by changing the restriction rules and that you can integrate it with your auto responder.

[Software Defender](#) is a great system and very well thought out. It is easy to use. The manual is well written and takes you step by step through the process. We had never used this system before, but was able to generate a secure package within 15 minutes. If you create and sell your own products, then you owe it to yourself to protect your investment and make sure you get paid for every download of your product. [Click here](#) for more info.
